Inflection Points

Wedneday, October 25th

12:00 Noon - 108 West Village H

Every few decades, a fundamental shift occurs in how IT reaches customers. The shifts are akin to what Intel co-founder Andy Grove calls "strategic inflection points," or the "time in a life of a business when its fundamentals are about to change."

The IT industry is on the cusp of a new inflection point. In the next few years, the deliverey of information technology will shift from monolithic, static, resource-centric computing to loosley coupled, services-oriented infrastructure.

In this talk, Jeffrey Nick, EMC Corporation's Chief Technology Officer and Senior Vice President will discuss the industry forces leading to the new inflection point issues with todays infra-structure and the evolving services oriented infrastructure.

Pizza and soda will be served!
